

Changing Your Email Password

Eric Van Tol - 2016-08-26 - Comments (0) - Email

Starting July 2009, changing your Atlantech email password is no longer done via our Webmail interface. Atlantech Online has implemented a new password policy which can be found [here](#). In order to put this new policy in place, we have moved authentication off of our mail server onto a dedicated authentication server.

To change your email password, you will need to go to our new Email Authentication page, which can be found [here](#).

1. Log in with your current username@domain and password. If your email address is jdoe@atlantech.net, then you will need to use jdoe@atlantech.net as your username. Enter your password below, and click Submit.
2. You will be directed to a form to change your password. Enter your new password in the first box, and enter it again in the second box. Use the "score" to determine how secure your password is.
3. Click "Submit". If your password matches our [password policy](#), then your password will be changed.
4. You can view more details about the strength of your password by clicking the "click here for a detailed view" link at the bottom of the page.
