

EoC Equipment

Eric Van Tol - 2016-08-26 - Comments (0) - Connectivity

Atlantech Online provides Ethernet over Copper services to customers throughout the United States. We partner with several third-party carriers to provide this service for our customers. Each third-party carrier utilizes their own "Network Interface Device" (NID) that needs to be installed inside the customer's premises. This device acts as a bridge between the carrier's network and the customer's network, and often bonds several pairs of dry copper wire together to achieve speeds greater than legacy copper services like T1 and DSL.

The following is a list of equipment that Atlantech Online carrier partners use:

Hatteras Networks HN Series

Adtran NTUs

This list is subject to change.
